Camille and Gary,

In addition to the sites listed below, I was told this morning that management needs a fact sheet for North Cavalcade and San Jacinto Waste Pits.

This is on a short timeframe. Please send the fact sheet to John Meyer by noon today. Also, please include me as a cc.

As mentioned below, please use the WE CARE format.

Gary

Cathy and Vince,

Can you pull together fact sheets for UNC, Chevron Questa and US Oil. Would like to get them to Cyndi Fanning today, so we can get Ext. Affairs approval before sending to OSRTI. Thanks. Use the standard WE CARE format.

John –

None of the sites highlighted in red on Christine's chart are relevant – they are all in districts of members not on the committee. I would concentrate on U.S. Oil, United Nuclear, and Chevron Questa. Old Esco got some attention when it was first proposed, but hasn't lately – I might include it just in case.

LaWanda may have further insight on Louisiana sites. Note that Cleve Reber in LA District 6 is left off Christine's list.

Hi John, Carlos and Cathy,

Due to an upcoming congressional House Energy & Commerce committee briefing, we are looking for sites in the congressional districts represented on that committee that either currently have some congressional interest (issues or successes) or may not have interest but can be seen as success stories. Attached I have included the list of the congressional members who may be present at the briefing and the sites that are in their districts (let me know if you know of any sites missing!).

What we need is:

- Any sites in these member districts where you know there has been congressional interest- fact sheet (if issues)

- Any sites in these member districts where there are success stories that can be highlighted-bullet describing status

Ideas that we have come up with so far include:

- American Creosote Works – There is currently a Pilot Study being conducted at the site in which a food grade surfactant is used to put the creosote in emulsion so that it can be extracted more easily. The creosote is then extracted and separated from the emulsion to create a higher grade of creosote that is then “recycled”. The reuse of creosote has the potential to save \$25K/year in disposal costs. The Pilot Study has been successful so far. The ROD Amendment for the site has been bumped to 2014.
- Old Esco – This site has a September 2010 ROD selected excavation, ICs, and groundwater monitoring. The Region conducted the selected remedy as a Time Critical Removal Action (using removal dollars) between May and September 2011 and signed a NFA ROD Amendment in September 2011.

I know that Nancy Jones gave you a heads up that we might be requesting site information. For some reason the original list was missing some sites and might include sites that are no longer in the applicable districts. I added in sites for the NPL tab, but not for the removal tab (if you know of a removal where there has been congressional interest or where it is a success, please feel free to include it).

Please let us know what sites you think are of interest and which may be success stories. If it is a success story and is new- a few sentences/one bullet describing it should suffice. If we already have a fact sheet we can work to get it updated.

The briefing has not yet been scheduled, but we have been asked for this information by the end of this week (6/28).

Please let Nancy or I know if you have any questions or concerns.  
Thanks!
